

CRRX (Carrero) — WhitePaper v1.1

Carrot Hero Ecosystem — 2025
Website: <https://carrothero.xyz>
Network: Base
Contract: 0x271eB17040aE44A3487065976Dc46898CbCBcc5D

“Double R, no error — it’s Carrero.”

Abstract

CRRX is the native utility and governance token of the Carrot Hero ecosystem, built on the Base network. It powers NFT missions, community rewards, and Web3 storytelling, combining on-chain transparency with long-term sustainability. The project focuses on artistic integrity, token fairness, and educational openness in building independent crypto ecosystems.

Relaunch of CRRX on Base Network

Date: July 29, 2025
Event: CRRX (Carrero Token) Relaunch and Immediate Uniswap V3 Listing

Carrot Hero relaunched its Carrero (CRRX) token on the Base blockchain after suspending operations on the Abstract chain due to security and usability issues. The tokenomics and distribution model remain consistent with the earlier version, ensuring continuity for the community. At launch, 5,000,000 CRRX were issued out of a total supply of 10,000,000 CRRX. Trading began immediately on Uniswap V3 (Base network), providing enhanced liquidity and accessibility. An airdrop was executed for NFT holders as part of the transition, rewarding early supporters and maintaining engagement.

Token Distribution Overview

Total Supply: 10,000,000 CRRX
Mint Dates: July 29 and July 31, 2025

The CRRX total supply was minted across two verified transactions. Half of the total supply is locked under a vesting contract to ensure transparency and stability.

Allocation	Percentage	Purpose
Airdrops	10%	Community distribution events
Creators	10%	Founding and creative contributors
Development & DAO Fund	30%	Governance and long-term ecosystem growth

Public Circulation (50% of Total Supply): Includes 5% distributed through the first airdrop. Remaining 45% provides market liquidity and reserves for ecosystem use.

Vesting Smart Contract Deployment

Date: July 31, 2025
Locked Amount: 5,000,000 CRRX (50% of total supply)

A dedicated vesting smart contract has been deployed to lock half of the CRRX supply, ensuring long-term transparency and ecosystem sustainability. To prevent unauthorized minting, the mint function has been permanently disabled, making the total supply immutable.

Initial Liquidity

The initial liquidity pool was established with 2,500,000 CRRX and 0.06 ETH on Uniswap V3 (Base network). This setup provided the foundation for early trading and transparent on-chain price discovery. A future rebalancing is planned to adjust the pool to approximately 700,000 CRRX and 0.165 ETH (~\$700), followed by a liquidity lock of

12–18 months to ensure long-term stability and investor confidence.

Airdrop Distribution — Phase 1

Total Distributed: 500,000 CRRX (5% of total supply)

A total of 500,000 CRRX tokens were distributed to early NFT holders during the first official airdrop, representing 5% of the total supply. Recipients included holders of all Carrot Hero NFTs, excluding NFT #004 and #005. Holders of NFT #004 and #005 will receive their share in a future phase. In total, 56 early project supporters participated.

Liquidity Adjustment and Lock Plan (Q4 2025)

In Q4 2025, the CRRX liquidity pool will be rebalanced to align token-ETH ratios. The adjusted liquidity — around 700,000 CRRX paired with 0.165 WETH (~\$700) — will be locked for 12–18 months, ensuring sustainable growth and verifiable liquidity transparency.

Ecosystem Integration

CRRX is integrated across:

- OpenSea — Carrot Hero Collection
- X (Twitter): https://x.com/Carrothero_xyz
- GitHub Repository: <https://github.com/RI10>
- Website – Memecoin Page: <https://carrothero.xyz/memecoin>

Disclaimer

This document is for informational purposes only and does not constitute financial advice or a public offering. CRRX tokens are designed for use within the Carrot Hero ecosystem and carry no guarantee of financial return.
